

## MULTI-BLADE FIRE DAMPER

### Characteristics:

A multi-blade fire damper for general ventilation systems, with an electric spring return actuator.

SO

version: 19/03/24

### Intended use

The WKP-O multi-blade fire damper is designed for application in general ventilation systems as cut-off partition separating the fire-engulfed zone from the remaining part of the building (normally open). The purpose of this damper is to prevent the spread of fire, heat and smoke.

The WKP-O damper may also be used for a transfer function.

The WKP-O dampers are designed, manufactured and tested in accordance with the following standards: PN-EN 15650 "Ventilation for buildings – Fire dampers" and PN-EN 13501-3 "Fire classification of construction products and building elements – Part 3: Classification using data from fire resistance tests on products and elements used in building service installations: fire resisting ducts and fire dampers."

The effectiveness of the dampers is confirmed by tests according to PN-EN 1366-2 "Fire resistance tests for service installations – Part 2: Fire dampers."

The WKP-O fire damper is classified as tightness class C (housing tightness) on the basis of tests carried out according to PN-EN 1751 "Ventilation for buildings. Air terminal devices. Aerodynamic testing of dampers and valves."

### Classification

The WKP-O fire dampers are classified according to fire resistance classes and can be installed in building partitions as listed below:

- **EI 120 (v<sub>e</sub> i↔o) S** – horizontal blades, rigid walls with low density (650 ± 200 kg/m<sup>3</sup>) or higher, 125 mm in thickness or more, and EI120 or a higher fire resistance class (e.g. concrete walls, solid brick walls, cellular concrete block walls, hollow masonry unit walls or concrete slab walls)
- **EI 90 (v<sub>e</sub> i↔o) S, E 120 (v<sub>e</sub> i↔o) S** – horizontal or vertical blades, rigid walls with low density (650 ± 200 kg/m<sup>3</sup>) or higher, 120 mm in thickness or more, and EI90 or a higher fire resistance class (horizontal or vertical blades), EI120 or higher (horizontal blades) (e.g. concrete walls, solid brick walls, cellular concrete block walls, hollow masonry unit walls or concrete slab walls)
- **EI 120 (v<sub>e</sub> o→i) S** – horizontal blades, Standard flexible walls, 125 mm in thickness or more and EI 120 or a higher fire resistance class

Where:

**E** - fire integrity

**I** - fire insulation

**S** - smoke leakage

**90/120** - duration of fulfilment of E, I and S criteria, in minutes

**v<sub>e</sub>** - damper installed directly in a wall

**i↔o** - operating effectiveness criteria are met from inside to outside (fire inside), and from outside to inside (fire outside).

### Description

The WKP-O dampers are made up of a rectangular housing, movable blades and a drive system.

The dampers' housing is made of fire-rated boards and steel structural members. Both sides of the housing are equipped with steel connection spigots, which enable easy connection of a duct.

Movable blades, made of mineral silicate composite, are fastened to the housing by means of metal pins.

There are intumescent seals mounted on the inner side of the housing and on the blades. Their characteristic feature is the volume increase at high temperatures, tightly filling all leaks between the baffle and the body. A bubble seal ensures the leak tightness at ambient temperature.

The WKP damper is provided with an innovative actuating mechanism, which ensures the counter rotation of the blades. The mechanism is made up of, among other things, gears made of fire-rated materials, blades and an electric actuator.

During normal operation of the system, the blades are in the open position.

The permissible air velocity for the WKP-O damper in a BxH connection duct is 12 m/s.

The WKP-O damper is equipped with an electric spring return actuator of BF or BFN series by BELIMO and a BAT or BAE thermal fuse (72 °C), which is the damper's drive system with AC 230 V or AC / DC 24V.

## Manufacturing versions

The range of dampers covers the following dimensions: a clear damper width from 200 to 1200 mm (10 mm intervals) and a clear damper height from 200 to 800 mm (100 mm intervals). The basic range of damper sizes along with the actuators used is presented in the table below.

## Dimensions

Figure 1. Dimensions of the WKP-O damper: a) WKP-O-K, b) WKP-O-KR (with a spigot on the R-side).

Figure 2. Dimensions of the WKP-O-T damper

Where:

- B** - damper clear width (min.200 max 1200 mm)
- H** - damper clear height (min. 200 max 800 mm)
- N** - number of blades
- C** - as indicated in the table

Table 1. Dimensions of the WKP-O damper.

## Accessories

Types of masking panels for the WKP damper (fixed to a building partition).

Figure 5. Flat honeycomb mesh cover

Figure 6. Convex honeycomb mesh cover

The MKW honeycomb mesh cover for WKP-O dampers are available in standard dimensions B and H (given in table 2).

Example: for a WKP-1200x800 damper, mounted with horizontal blades, the MKW-B-1200x800 masking cover should be ordered.

Figure 7. The KST grille for a damper with horizontal blades

Figure 8. The KST grille for a damper with vertical blades

The KST- $\langle C \rangle \times \langle D \rangle$  grille should be ordered for the nominal dimensions C x D equal to the dimensions of the assembly opening for the WKP damper according to the formula:

- $C=B+230$  mm and  $D=H+100$  mm - for WKP dampers with horizontal blades,
- $C=H+100$  mm and  $D=B+230$  mm - for WKP dampers with vertical blades.

Example: for a WKP-1200x800 damper, mounted with horizontal blades, the KST-1430x900 masking grille should be ordered.

# WKP-O - Multi-blade fire damper

When ordering, please provide information in accordance with the following pattern:

**WKP-O-<F> - <W> - <B> x <H> - <A> / <ADD>**

Where:

<b>F</b>	type of the actuation system used	
	E	- electric spring return actuator
<b>W</b>	manufacturing version*	
	<b>K</b>	- with connection frames (spigots) - default
	T	- no connection frames (transfer version)
	KL	- with one connection frame on L-side
	KR	- with one connection frame on R-side
<b>B</b>	Damper clear width [mm]	
<b>H</b>	Damper clear height [mm]	
<b>A</b>	Type of the actuator	
	BFN	- for $B \times H \leq 0,40 \text{ m}^2$
	BF	- for $B \times H > 0,40 \text{ m}^2$
	<b>Product marking:</b>	
	24/230	- supply voltage
	T	- thermoelectric tripping device
	ST	- connection socket
<b>ADD</b>	Accessories (not available for version with connection frames $\langle W \rangle = K$ )	
	MKW-B	- flat honeycomb mesh cover
	MKW-D	- convex honeycomb mesh cover (to thermoelectric tripping device)
<b>P</b>	Finishing of mesh cover*	
	<b>SL</b>	- powder coated steel
	SO	- galvanized steel
<b>RAL</b>	RAL colour of mesh cover (for SL finishing only, standard RAL9010)	

\* optional items – if not indicated, default values will be used

Sample product marking: **WKP-O-E-T-1200x800-BF24-T / MKW-B-SL9010**
